Profile

With extensive experience in container technologies like Kubernetes and Docker, coupled with expertise in CI/CD systems such as Jenkins and GitHub Actions, I have designed, built, and managed robust cloud-based infrastructures on AWS for diverse organizations. In addition to DevOps practices, I specialize in platform engineering, managing and optimizing Kubernetes platforms on AWS to ensure scalability, reliability, and efficiency.

My deep knowledge of AWS services, combined with a strong background in automating software builds, testing, and deployment pipelines, enables me to deliver secure, high-quality, and business-aligned solutions. I bring a strong understanding of modern software development methodologies, ensuring that development and operations teams can deliver value faster and more effectively. Passionate about innovation and continuous learning, I consistently explore emerging technologies to enhance the effectiveness and value of DevOps and platform engineering practices. Whether working independently or as part of a team, I am committed to driving operational excellence, enabling developer productivity, and exceeding organizational goals.

Professional Experience

Cloud DevOps Engineer,

08/2023 – present | Bengaluru, India

Mercedes-Benz Research And Development India

Projects: DyP CaaS, Hyperion

- Spearheaded platform engineering initiatives by managing Kubernetes platforms on AWS, ensuring scalability, security, and developer enablement.
- Implemented Crossplane for platform-level resource provisioning, enabling infrastructure as code and seamless AWS resource management for development teams.
- Applied Kubernetes hardening techniques and best practices for production-ready applications, incorporating autoscaling for scalability and fault tolerance.
- Provided application and platform support during Kubernetes upgrades and maintenance activities.
- Implemented security best practices.
- Led application migrations between datacenters (EDC to FDC) and from on-premises infrastructure to AWS cloud platforms.

Client: Mercedes Benz Research & Development India

Project: DHC CAAS

- Worked with Multiple Application as Azure & K8S Consultant. Participated in Application Cloud Architecture Design
- Orchestrate & containerize.net/sprng boot/nodejs/python apps
- Apply K8S hardening and best practises for production-ready apps. Incorporate autoscaling into application deployments.
- Provide application support during platform upgrade activities.
- Assess and apply security, liveness-readiness probe, fault-tolerance,resource allocation, and configuration externalisation to achieve zero downtime.
- Use Traefik/Nginx IC to provide custom Host/path based routing for UI/API.
- Implimented Kong gateway with oneapi plugin integrations for API's.
- Application migrations to several datacenters (EDC to FDC).
- Set up and manage an AKS cluster. Containerize apps by creating Docker images and deploying them as state-full/stateless with the proper SecurityContext.
- Connect Keyvault with AKS using the correct SecretProviderClass and Access policy.
- Set up an Azure Devops pipeline for each application and infrastructure individually.
- Created and deployed CICD pipelines utilising Jenkins and Git actions to automate the build, test, and deployment of Kubernetes applications.
- Set up CI/CD Build/Release pipelines using Github Action / Jenkins for Sonarqube & Blackduck integration.
- Developed and administered monitoring systems using Grafana,Prometheus, and Zabbix to assure the stability and performance of applications on Kubernetes.
- Designed and maintained logging solutions that gather and analyse log data for troubleshooting and debugging using OpenSearch.
- Worked with cross-functional teams, stakeholders, and customers to understand their needs, give technical advice, and provide solutions.

DevOps Engineer, Microland

2021 – 2023 | Bengaluru, India

Client: Mercedes Benz Research & Development India

Project: DHC CAAS

Responsibilities:

- Worked with Multiple Application as Azure & K8S Consultant. Participated in Application Cloud Architecture Design
- Orchestrate & containerize.net/sprng boot/nodejs/python apps
- Apply K8S hardening and best practises for production-ready apps. Incorporate autoscaling into application deployments.
- Provide application support during platform upgrade activities.
- Assess and apply security, liveness-readiness probe, fault-tolerance,resource allocation, and configuration externalisation to achieve zero downtime.
- Use Traefik/Nginx IC to provide custom Host/path based routing for UI/API.
- Implimented Kong gateway with oneapi plugin integrations for API's.
- Application migrations to several datacenters (EDC to FDC).

- Set up and manage an AKS cluster. Containerize apps by creating Docker images and deploying them as state-full/stateless with the proper SecurityContext.
- Connect Keyvault with AKS using the correct SecretProviderClass and Access policy.
- Set up an Azure Devops pipeline for each application and infrastructure individually.
- Created and deployed CICD pipelines utilising Jenkins and Git actions to automate the build, test, and deployment of Kubernetes applications.
- Set up CI/CD Build/Release pipelines using Github Action / Jenkins for Sonarqube & Blackduck integration.
- Developed and administered monitoring systems using Grafana, Prometheus, and Zabbix to assure the stability and performance of applications on Kubernetes.
- Designed and maintained logging solutions that gather and analyse log data for troubleshooting and debugging using OpenSearch.
- Worked with cross-functional teams, stakeholders, and customers to understand their needs, give technical advice, and provide solutions.

Design Engineer Professional, British Telecom (BT)

2019 – 2021 | Bengaluru, India

As a Design Engineer professional at British Telecom company working on CA API Layer7 Gateway called as SIPG.

I was responsible for,

- Design APIs for OIDC, OAuth2.0, and security implementation using modern authentication PKCE flow.
- Configuring the API Policy and Onboarding
- Writing clean code for logging and alerting in the design flow
- Working closely with clients to understand their business requirements and design solutions that meet their needs.
- Configuring and customizing the CA API Layer7 Gateway to meet the client's requirements, and ensuring that APIs are properly integrated into client systems. You will work closely with developers, architects, and business analysts to ensure that APIs are designed and developed to meet business needs and are properly secured using modern authentications.

In addition to above, I was responsible for maintaining the infrastructure, Monitoring and alerting setup using Splunk, Grafana and other Monitoring Tools.

Sr. Consultant, Quinnox Inc

2016 – 2019 | Bengaluru, India

Client: Motorola Inc , Lenovo.

As a Consultant working on CA API Layer7 Gateway technology,

I was responsible for,

- Developing and Configuring the API for REST, WSDL and WEB based applications
- Developing complex OAUTH and OIDC Policies for the WEB and SPA Applications
- Managing and Onboarding API
- Gateway Upgrade and Management
- Monthly Security Patch upgrade and maintenance

In addition to managing and onboarding APIs and designing and developing API policies for web, REST, and WSDL applications, the Consultant working on CA API Layer7 Gateway technology will also be responsible for application deployment and hosting over JBoss Application Server.

This will include configuring and customizing the JBoss Application Server to meet the client's requirements, ensuring that applications are properly integrated with the CA API Layer7 Gateway, and monitoring and troubleshooting any issues that arise.

Skills

CNCF Tools

Kubernetes
Velero
Helm
Litmus

Containers

Docker,
Kubernetes,
Helm Charts,
Traefik IC,
Nginx,
Istio Service Mesh,
Harbor Container Registry

Gateways

Broadcom API gateway,
Kong gateway,
Traefik

Security Tools

Hashicorp Vault,
AWS Secret Manager,
SecHub,
SAST Tools,
Sonarqube,
BlackDuck

FOSS

Crossplane
Git
Hashicorp Vault
Prometheus,
Grafana,
Elasticsearch,
Opensearch,
Kibana,
Logstash,
Confluence,
jira

CI/CD

Jenkins
Github Actions,
Argo-CD

Database

Postgres
MySQL

Chaos Engineering

Litmus

Cloud Technologies

AWS

Languages

Python
Go

Education

Bachelors Of Engineering in Electronics and Communication, *AITM, Belagavi*

2009 – 2013 | Belagavi

Languages

- English
- Hindi
- Kannada

Interests

- Painting
- Reading on Internet

Awards

Best Boy Of The Year,

2007

HNS Kannada Medium High School, Belagavi

Won Best Boy Of the Year Award in High School for Academic activities

Pinnacle Award,

Mercedes-Benz Research and Development India

Quarterly Performance Award.

Bronze Award,

Mercedes-Benz Research And Development India

Quarterly Performance Award

Employee Of The Year, Quinnox Inc
